

FOR IMMEDIATE RELEASE

EXPERIENCE A WORLD THAT IS GROWN, NOT EXTRACTED.

Biofabricate launches the Biofab Fair, 16–17 September 2025 | London, UK

LONDON, UK, 8th JULY 2025. Biofabricate, the global authority at the forefront of bioinnovation for over a decade, announces the launch of its latest European event: the Biofab Fair.

Inspired by the World's Fair, the Biofab Fair will reveal what our world could look – and feel – like if built with biology. Taking place on 16 and 17 September 2025 at Big Penny Social in the Walthamstow design district, this two-day event brings bioinnovation to the global design vanguard: London—where radical ideas become movements, and the future of sustainable design takes root first.

“We’ve championed the biomaterial movement since day one. Now more than ever, it’s time to show what the future looks like when design meets biology,” explains Biofabricate founder and CEO Suzanne Lee. “The Biofab Fair places design at the heart of bioinnovation—where ideas meet action and new materials and ingredients become real-world solutions”.

WHY THIS MATTERS NOW

The Design World is Ready: From furniture to fashion, packaging to interiors, beauty to mobility, a growing community of creatives and brands are seeking viable alternatives to plastics and petrochemicals.

Biology as a Design Medium: After many years of technology focus, it’s time to cultivate the missing strand—developing the design languages of biology.

Momentum is Building: Consumers want to be a part of the change, investors are seeking the next breakthrough and legislators are demanding action.

WHAT TO EXPECT FROM THE BIOFAB FAIR

As a Champion Partner of the London Design Festival, the Biofab Fair takes its place at the centre of the city’s creative calendar. Located on the William Morris Design Line, the Fair is a two-day exploration of how design needs to drive the future of bioinnovation. Live stage talks and an exhibition put design at the heart of the conversation—revealing how creative thinking can elevate breakthrough biomaterials and bio-based technologies from scientific potential to real-world impact. It’s about demonstrating not just what’s technically possible, but what’s beautiful, desirable, and built for life.

HOW TO BE PART OF IT

Attend: Early-bird tickets available now. <https://www.biofab.world/tickets>

Exhibit: A limited number of opportunities remain. Get involved here <https://www.biofab.world/>

Spread the word: Media partnerships and speaker enquiries. Talk to us at press@biofabricate.co

ABOUT BIOFABRICATE

Biofabricate is the global authority on biomaterials—where science, design, and nature converge to reimagine how we make everything. Headed by designers Suzanne Lee and Dr Amy Congdon since 2014, the organization leads a growing movement to replace extractive materials with ones grown from living cells like fungi, microbes, and algae. Through its unique blend of consultancy, education, and community-building, Biofabricate accelerates the adoption of sustainable biomaterials across industries from fashion and interiors to beauty and biotech. It connects pioneering startups with global brands, translating cutting-edge science into real-world impact. As our planet demands radically new ways of making, Biofabricate offers not just solutions, but a visionary path forward—transformative, tangible, and alive.
