WEVER & DUCRÉ
LIGHTING

too short

for boring

lighting

SHOREDITCH DESIGN WEEK
SEPTEMBER 15 - 20 | SHOWROOM LONDON
477B-478 THE ARCHES BATEMANS ROW, SHOREDITCH, LONDON EC2A 3HH

Bold Belgian creativity in the heart of London's design district, Wever & Ducre invites you to experience lighting with a fresh perspective. Built around one simple belief - life is too short for boring lighting - our space is designed to inspire, surprise, and spark conversation.

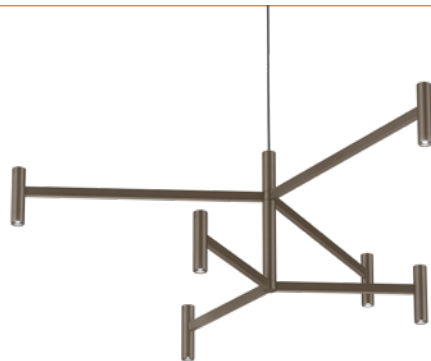

Expect striking lighting installations and an atmosphere made for discovering new ideas, connecting with fellow design enthusiasts, and enjoying a drink along the way. Step inside, stay a while, and experience light differently.

LIKE A SKETCH INTO THE AIR MATCH LUSTA ADDS AN ARTISTIC TOUCH

Its reduced, minimalist design makes MATCH LUSTA almost appear like a modern work of art. It therefore looks just as impressive in lobbies and lounges as it does at home. Thanks to its adjustable arms, the aluminium luminaire – available with 3, 6 or 9 spots – can be flexibly adapted to any room situation. An elegant statement piece that also creates beautiful accents above round dining tables. Available in champagne, brushed bronze or black.

MATCH LUSTA

IF YOU MISS A LINE STUDO HELP'S YOU OUT

The ultra-slim STUDO demonstrates how versatile a luminaire can be with its many suspension options. Its powerful reflector is housed in a high-quality aluminium profile connected to the mounting base by a flat textile cable. The result is a clean, minimalist look that convinces in offices, home offices or kitchens alike. The dimmable LED luminaire is available in various lengths and colour variants.

STUDO

LOVE AT SECOND SIGHT QITO LIKES TO PLAY HIDE AND SEEK

The beauty of spots? They draw attention to important details while remaining discreetly in the background. QITO does this particularly well, as the flexibly adjustable aluminium spot is also available as a trimless version and therefore almost disappears into the ceiling. Those who prefer to create more striking accents can choose the powerful surface-mounted version, which is available with two spots. And – like all QITO spots – in many different colour variants with an elegant brushed finish.

QITO

LAYER BY LAYER DEEP CONNECTIONS PRINTED IN 3D

High-quality spotlight combined with a resource-saving housing? The DEEP IQ series shows how it's done. The spotlight made from 3D-printed material is, as you would expect from the DEEP family, equipped with highly efficient LED modules. The efficiently manufactured DEEP IQ series is available as a classic downlight or adjust version, as well as in various colour options.

HIGH IN THE SKY FLYRA KNOWS NO LIMITS

FLYRA's slim design is best showcased when combining different lengths. This creates an elegant centrepiece that attracts attention not only in living rooms. The finely grooved glass luminaire also creates striking accents in lounges or corridors. Its secret? It can be mounted vertically or horizontally, offering endless design possibilities. FLYRA is available in three lengths with matching colour details.

FLYRA

LOOK INTO THE CRYSTAL BALL OPLIA PREDICTS A BRIGHT FUTURE.

The skilful interplay with the glass sphere gives OPLIA an almost mystical appearance. That is why the small glass luminaire with its opal LED insert fits perfectly in bedrooms or living rooms, where it provides an especially warm light. OPLIA is available as a single version or, now new, as a CHANDELIER – a true eye-catcher in any room.

OPLIA CHANDELIER

PRETTY IMPRESSIVE SOME THINGS JUST LEAVE TRACES

Some designs don't go unnoticed. Like the finely grooved surface of the TRACE family, which gives the luminaires a distinctive character. Where does this effect stand out particularly well? On large wall surfaces or above the dining table, where they skilfully create accents. Now new to the range: TRACE Mini as a surface-mounted wall version and as an inset for the STREX system.

TRACE MINI + TRACE ON STREX

LOOK AT THIS! LIKO HIGHLIGHTS YOUR FAVOURITE THINGS

Anyone wanting to present a new product collection or showcase brands effectively needs lighting that can be flexibly adapted. The best choice? A modern 3-phase track system whose adjustable spots can be repositioned at any time. The perfect example? LIKO, available in three sizes and two colour variants. This makes the powerful spot – available with or without DALI dimming function – indispensable even in large, spacious rooms.

LIKO

FROM BELGIUM WITH LOVE

Every story has to have a beginning. Ours begins in the early eighties, when a handful of young Belgians decide to start a new lighting company. So far, so good. Yet what name should the company be given? Since several official languages are spoken in Belgium – including Flemish and French – there was only one choice: The name would need to be equally at home in both worlds, phonetically. Then, by chance, a document fell into the hands of the company's founders: a little guide to a successful life. His advice: hard work ("WERklust"), trust ("VERtrouwen"), and enthusiasm ("ENthousiasme"), but also courage ("DURf") and a good dose of creativity ("CREativiteit"). Today, these five points still constitute our company philosophy.
