

Designing for Accessibility & Comfort

Remtek Workplace to Showcase People-Centred Ergonomic Design at Neuroplaces

At Neuroplaces Remtek Workplace will be showcasing how ergonomic products and thoughtful workspace design can help create comfortable, accessible and productive working environments.

The exhibition will give visitors the opportunity to explore how workplace design can respond to different people and ways of working. Remtek Workplace will be presenting a selection of ergonomic products and workspace solutions, while its team will be available to discuss how factors such as adjustability, movement, posture and individual preferences can influence the way a workspace performs for the person using it.

Rather than promoting a single ideal workstation, the focus will be on the value of designing around the individual, their role and their environment. The exhibit will include a curated selection of different products, giving visitors the opportunity to see solutions in context and consider how small changes to equipment and setup can make a meaningful difference.
